

Andrew Kincaid

SENIOR MANAGER, UNDERWRITING SYSTEMS

Amityville, NY

hello@kincaid.io

kincaid.io · LinkedIn · GitHub

I lead engineering at the intersection of insurance, platform design, and applied AI. My work lives where business process meets software: sitting with underwriters and business leaders, defining how their work actually happens, and turning that into policy admin systems, raters, workflows, and integrations that hold up in production. I own platforms end-to-end and manage teams across internal engineering and forward-deployed vendor partners.

EXPERIENCE

Acrisure

Feb 2024 – Present

• Sr. Manager, Underwriting Systems

Aug 2025 – Present

Own the modernization of multiple MGA verticals from legacy policy admin systems onto a modern, shared policy admin platform. Sit between business leadership, underwriting, actuarial, and engineering — and make the calls on how real-world workflow becomes real software.

- Drive the transition of multiple MGA verticals off legacy policy admin platforms onto a modern, shared policy admin system — unifying them on one database and accounting ecosystem and aligning policy status, binding, and issuance across the book.
- Make the key design decisions for how business workflow is implemented in the new policy admin system — often defining the process itself alongside underwriters before it can be built.
- Manage four internal engineers and direct a four-person forward-deployed team from our platform vendor, running one roadmap across two reporting lines.
- Own the monolith API I built — the system of record for every rater and every integration with internal and external counterparties.
- Serve as the single translation layer between underwriting, actuarial, business leadership, and platform engineering; the person who turns a meeting into a spec and a spec into code.

• Backend Team Lead

Feb 2024 – Aug 2025

- Led a backend team of 2–3 engineers and kicked off the underwriting platform modernization effort that became our current policy admin program.
- Architected the first generation of our raters, workflow system, and integration surface — the same components I now own at platform scale.
- Translated underwriting and business requirements into durable backend services, building the patterns the wider team still uses today.
- Promoted into Sr. Manager after demonstrating ownership of scope far beyond the original team charter.

- Backend Services Team Lead

May 2022 – Jan 2024

 - Led the backend team powering a commercial insurance platform, partnering daily with underwriting, actuarial, product, and compliance.
 - Built a full policy administration system from scratch — quoting, binding, issuance, endorsements, and the data model under all of it.
 - Replaced a vendor-built Excel rater with a Python rater built on a custom DSL, moving rating logic into version control and giving business users a readable, auditable model they could contribute to.
 - Established CI/CD, testing, and documentation practices the team still runs on; mentored engineers through the shift from scripts to services.
 - Supported BI and data science with reporting, debugging, and visualization; helped shape forms, regulatory, and compliance workflows.
- Software Engineer

Sep 2021 – Jun 2022

 - Shipped early backend services for the platform and helped set the technical direction that carried into my time as team lead.
 - Built close working relationships with underwriting and product — the foundation for every later leadership role.

AM Best

Jun 2017 – Sep 2021

- Quantitative Analyst II

Dec 2019 – Sep 2021

 - Developed and maintained a Python analytical package for the Quantitative Analysis Team, housing the capital adequacy model, projection model, and supporting credit-rating tooling.
 - Designed database schemas and supporting objects for the team's analytical and reporting pipelines.
 - Contributed to a Vue.js SPA and Django REST API serving internal analysts and external clients.
 - Led design and implementation of CI/CD on Azure DevOps — first formal deployment pipeline the team ran.
- Quantitative Analyst

Jun 2018 – Dec 2019

 - Built out new capabilities on the quantitative toolkit used across the ratings organization.
 - Deepened the insurance-sector foundation that shapes how I build software today.
- Associate Analyst

Jun 2017 – Jun 2018

 - Converted a suite of Excel/VBA models into Python and consolidated multiple standalone models into a single maintainable codebase.
 - First exposure to treating insurance models as software — version-controlled, testable, reviewable.

FOCUS AREAS

Domain	Underwriting systems · Policy administration · Rating & raters · Workflow automation · Insurance operations · Regulatory & compliance workflows
Leadership	Direct engineering management · Forward-deployed / vendor team direction · Cross-functional stakeholder translation · Platform roadmap ownership · Mentorship & team growth
Engineering	Python · FastAPI · Django · SQL / PostgreSQL · JavaScript / TypeScript · Vue.js · HTML / CSS · GCP · CI/CD · API & integration design
Applied AI	LLM-assisted workflows · Document & form extraction · Underwriter copilots · Agentic automation for ops

EDUCATION

Muhlenberg College
B.S., Mathematics
Football team captain

CREDENTIALS

- Associate in Insurance Accounting and Finance (AIAF)
- Society of Actuaries — Exam P and Exam FM
